

Fairness & RNG Testing Methods

Chillbet (WUNGroup) — chillbet.net

Chillbet brand is owned and operated by WUNGroup B.V., a limited liability company incorporated in Curaçao under the company number 160576, with registered business address at Chuchubiweg 17, Willemstad, Curaçao. WUNGroup B.V. has applied for the Gaming license with reference number OGL/2024/1382/0969 to be issued by the Curaçao Gaming Control Board. Under this license, WUNGroup B.V. provides casino games and 862 casino games, as well as other gaming entertainment. Curaçao Gaming Control Board (Gaming Control Authority) is the regulatory body responsible for supervising the operations of WUNGroup B.V. on chillbet.net (hereinafter “Site” or “Website”).

“WUNGroup B.V.” hereinafter—“Chillbet”, “We”, “Us” or “Our”;

User hereinafter—“User”, “You” or “Your”;

Together—“Parties”.

Some products on our site require a Random Number Generator in order to stay functional. The result of such products is generated by functions, described in each game. The function uses TRNG (true random number generator) as a source of randomness. Playing such games may result in monetary gain or loss. By playing any of the presented games, you agree with the game outcome. All products provided by WUNGroup B.V. are either developed by Chillbet, or supplied by licensed companies with approved status from Curaçao Gaming Control Board (Gaming Control Authority). Thorough testing takes place on all products offered by WUNGroup B.V., including External Compliance Testing. Approved testing companies conduct External Compliance Testing in order to verify certain elements of a game, such as Functionality, Display, Transaction, Rules and Mathematics (including Return to Player (“RTP”) calculation) etc.

The Theoretical Return to Player (RTP) value is an approximate calculation of the expected percentage of wagers that a specific game will return to the player after a significant number of plays. While the result of every single game is unpredictable by its nature and may result in either win or loss, the average return of a specific game in the long run typically approaches Theoretical RTP value.
